

ABSTRACT OF THE DISCLOSURE

A method and system are provided for projecting a three dimensional image. A projection system may include a holding tank for storing a reservoir containing a projection medium and a projector including a plurality of valves for projecting the medium from the holding tank. The projection system may also include an illumination device for illuminating the projected medium and a receiving mechanism for receiving the projection medium after illumination. The projection system may also include imaging data computation apparatus for computing imaging data, communication and control tools for communicating the imaging data to the projector in order to control valves for dispersing the projection medium, and an illumination control unit that controls an illumination device for illuminated the dispersed medium.
